

pH — regionally + locally mappable

$|\rho|_{\max}(\text{clean}) = 0.67$

Farm-LOFO $\rho = 0.43$

field-in-farm ICC = 0.46

tiers: 13 generalise (6 robust) / 134 zonal / 86 unstable / 279 weak

Behaviour: Strongest, spatially structured signal — spring canopy indices (GNDVI/NDVI), MAP and slope; passes the spatial-permutation test ($p < 0.001$). Mappable regionally and within-field.
