

P₂O₅ — weakly mappable (texture)

| ρ |max (clean) = 0.48

Farm-LOFO ρ = 0.42

between-field ICC = 0.49

tiers: 8 generalise (3 robust) / 25 zonal / 33 unstable / 446 weak

Behaviour: Weakly mappable: the raw maximum is autumn GLCM texture (temporal-leakage artefact); the leakage-clean driver is climate (GS_temp, $\rho=0.476$). Model error $\approx$ one supply class.
