

SOC — regional gradient only

$|\rho|_{\max}(\text{clean}) = 0.37$

Farm-LOFO $\rho = 0.25$

field-in-farm ICC = 0.38

tiers: 4 generalise (0 robust) / 13 zonal / 15 unstable / 480 weak

Behaviour: Regional gradient via slope/topography, but ~40% of it is the latitudinal moisture gradient; weak out-of-farm ($\rho=0.25$).
